MAC · STORAGE

I just got
56 GB back
in 30 minutes.

Without CleanMyMac. Without buying anything.

THE PROBLEM

Your Mac is hoarding storage you can't see.

Ghost data from apps you uninstalled. VMs you don't run. Caches that never expire.

~~Docker VMs · 11 GB~~

~~Comet leftovers · 3.2 GB~~

~~pnpm store · 5 GB~~

~~Notion data · 3 GB~~

~~Ghost simulators · 4.4 GB~~

~~Browser zombies~~

THE FIX

I told my AI agent to scan and clean.

No clicking through Settings. No buying a tool. Just a conversation.

MY PROMPT

"Check my storage and clean my Xcode files — take access of my storage and check everything please."

WHAT GOT NUKED

Nine sources of bloat. Gone in one session.

Docker VM Wasn't using it	11 GB
Claude sandbox VMs Auto-regenerate	9.8 GB
Browser ghosts Comet, Arc, Vivaldi, Dia	5.5 GB
pnpm store Package cache	5.0 GB
Ghost simulators From an old Xcode	4.4 GB
Apps I stopped using Notion, ClickUp, Lark, MT5	20+ GB

THE NUMBERS

BEFORE

82 GB

free

AFTER

138 GB

free

TIME

30 min

COST

\$0

CleanMyMac is \$40/year. This was a conversation.

DO IT YOURSELF

Six steps. One AI agent.

- 01 Scan ~/Library**
Find what's eating GB you forgot about
- 02 Kill ghost app data**
Data from apps you already uninstalled
- 03 Nuke Docker / npm / pnpm caches**
Biggest single wins if you're a builder
- 04 Clear browser HTTP caches**
Logins stay. Just the cache goes.
- 05 Move projects into ~/Projects**
Home dir stops looking like a junk drawer
- 06 Auto-archive Downloads > 90d**
Set it once. Never think about it again.

PHANI · AI

This is what an *A/OS* does.

Tells you what you can't see.

Acts on what you tell it.
